

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings of claims in the application:

**Listing of Claims:**

Please cancel claims 1-22 without any prejudice.

Please add the following new claims:

23. (New) A conferencing system comprising:  
a conference server;  
at least one client; and  
network connections coupling the conference server and the at least one client, the conference server providing data updates to the at least one client via the network connections, where the data updates are delivered in an output data type based on conferencing system connection or load parameters.
24. (New) The system of claim 23 wherein the output data type format can be changed.
25. (New) The system of claim 23 wherein the output data type comprises base uncompressed data.
26. (New) The system of claim 23 wherein the output data type comprises base compressed data.
27. (New) The system of claim 23 wherein the output data type comprises differenced uncompressed data.
28. (New) The system of claim 23 wherein the output data type comprises differenced compressed data.

29. (New) The system of claim 23 wherein the data updates are transmitted to a plurality of clients in parallel.

30. (New) The system of claim 23 wherein the connection or load parameters comprise connection or load parameters of the conference server.

31. (New) The system of claim 23 wherein the connection or load parameters comprise connection or load parameters of the at least one client.

32. (New) The system of claim 23 wherein the connection or load parameters comprise connection or load parameters of the network connections.

33. (New) A method for conferencing between a server and at least one client in a conferencing system comprising:

establishing a network connection between the server and the at least one client;  
providing conferencing data from the server to the at least one client, the conferencing data in a format based on conferencing system parameters; and  
changing the format based on changes to the conferencing system parameters.

34. (New) The method of claim 33 wherein changing the format occurs dynamically.

35. (New) The method of claim 33 wherein the conferencing system parameters comprise network connection speeds or loads.

36. (New) The method of claim 33 wherein the conferencing system parameters comprise speeds or loads of the at least one client.

37. (New) The method of claim 33 wherein the conferencing system parameters comprise server speeds or loads.

38. (New) The method of claim 33 wherein the conferencing data comprises data updates from the server to the at least one client.

39. (New) The method of claim 33 wherein the format comprises base uncompressed data.

40. (New) The method of claim 33 wherein the format comprises base compressed data.

41. (New) The method of claim 33 wherein the format comprises differenced uncompressed data.

42. (New) The method of claim 33 wherein the format comprises differenced compressed data.

43. (New) A method for conferencing between a server and at least one client in a conferencing system comprising:

establishing a network connection between the server and the at least one client;  
and

providing conferencing data from the server to the at least one client, the conferencing data in a format based on conferencing system parameters.

44. (New) The method of claim 43 wherein the conferencing data comprises data updates from the server to the at least one client.

45. (New) The method of claim 43 further comprising changing the format based on changes to the conferencing system parameters.

46. (New) A conferencing system comprising:  
a conference server;  
at least one client; and  
network connections coupling the conference server and the at least one client, the conference server providing conferencing data to the at least one client via the network connections, where the conferencing data is delivered in an output data type based on conferencing system parameters.

47. (New) The system of claim 46 wherein the conferencing data comprises data updates from the server to the at least one client.

48. (New) The system of claim 46 wherein the conferencing system parameters comprise network connection speeds or loads.

49. (New) The system of claim 46 wherein the conferencing system parameters comprise speeds or loads of the at least one client.

50. (New) The system of claim 46 wherein the conferencing system parameters comprise server speeds or loads.
